APRIL 2026

## Modification of the refrigeration unit

A more efficient solution is being introduced: two refrigeration units are replaced by a single, more powerful system.

The new unit has been rigorously tested in the laboratory and approved for sale, maintaining performance parameters at a comparable level to the previous version.

By reducing the number of critical components—particularly those most prone to failure—overall reliability is improved. This streamlined design also enables faster diagnostics and reduces the risk of system leaks by up to 50%.

No changes have been made to the unit's design or functionality.

**Product codes** have been **updated** accordingly.
